EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Nicholas Trenkle on 9/21/2010.

Please amend claims 30 and 31.

30. (Currently Amended) The non-transitory computer readable recording medium according to claim 29 wherein the step of generating an update request message about the status information includes the step of:

generating a PUBLISH message or REGISTER message whose body includes the status information and address on the terminal device.

31. (Currently Amended) The non-transitory computer readable recording medium according to claim 30, comprising the step of generating the PUBLISH message or REGISTER message whose body includes the following information: session type, information on the terminal device that has established the session,

Art Unit: 2454

and information on a coding system and a communication speed used by the established session.

REASONS FOR ALLOWANCE

2. Claims 1-49 will be allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art of record does not provide for nor suggests providing for as follows:

A session control server controlling a communication session created between at least two terminal devices, wherein said session control server comprises:

means for detecting based on a session control message communicated between said at least two terminal devices, a change in status information on a user of said one of said at least two terminal devices or on said one of said at least two terminal devices; and

means for notifying said presence server of an update request for the status information when the change in the status information is detected (see, e.g., applicant's published specification paragraph [0051]-[0055]).

The closest prior art (Manabe et al., Patent Publication No. 2003/0154251) teaches as follows:

The keyword-detection module (2 in figure 2) acquires from the chat client the remarks in the channel in which the chat client is participating. The keyword-detection module judges whether the acquired remark is sent from another user terminal

Art Unit: 2454

(equivalent to applicant's terminal device) or inputted by the local terminal (equivalent to applicant's terminal device). If a keyword is included in the remark the keyword-detection module instructs the status-detection section (4 in figure 2) to detect the user status (see, e.g., page 4, paragraph [0075]).

Therefore, Manabe does not teach of detecting a change in status information based on a session control message communicated between at least two terminal devices.

For these reasons, in conjunction with the other limitations of the independent claim, puts this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JEONG S. PARK whose telephone number is (571)270-1597. The examiner can normally be reached on Monday through Friday 7:00 - 3:30 EST.
